

Tropical Storm MIRINAE (1603)

At 8 p.m. on 25 July 2016, a tropical depression was formed over the South China Sea(17.1°N, 115.1°E), moving west-northwest at 18 km/h. At 2 p.m. on 26 July, the tropical depression intensified into a tropical storm and was named MIRINAE (1603) (18.3°N, 112.3°E), moving west-northwest at 24 km/h.

MIRINAE was closest to Macao at 6 p.m. on 26 July, passed by the ocean at about 440km south-southwest of Macao, and made landfall at the coast of Wanning city of Hainan at 10:20 p.m. on the same day. MIRINAE turned west-northwest afterwards. On 27 July, it passed through the Hainan Island, which then made landfall in northern Vietnam on 28 July and finally dissipated.

Tropical Storm MIRINAE (1603)
